

In the third sprint the team handled well the sprint goal defined in the beginning and tried and improved some of the problems from the previous one.

Things that went well:

The team did not slack or lag behind with the work

Reason: We were very motivated for this sprint because the clients were going to participate in the review and also because we had to finish everything on time so that we can have time to study.

The team implemented all the features promised in the sprint backlog

Reason: Even though this sprint was tight in time we succeeded to implement all the feature promised in the Sprint backlog. Even though some of the team members were not doing their part other team members put some extra effort and everything worked out.

The team did a good research of resources and ideas of the implementation

Reason: We handled well when it came to actual development of the project. We were able find our way towards the goal and find the right resources to start building the next Increment.

The team handled all the work timely

Reason: Good organization from the very beginning and clearly defined tasks in the Sprint backlog. Also good cohesion between the different developed parts.

The team was well prepared for the presentation

Reason: We were really motivated because Trimm were going to attend this review. We wanted to present our Increment in the best way possible.

Things that did not went well:

Miscommunication between team members

Reason: Some of the team members did not listen to the common ideas and agreements and were a bit individualistic. They did not share what they have done or committed it to the project repository. Which left some other team members wondering how exactly they should build their parts of project.

Low quality of some parts of the project

Reason: Rushing and miscommunication and not sharing work on time were the reasons. We did not have enough time to integrate every new feature in the project properly.

Not user intuitive design

Reason: The design team did not share their work until the end and the rest of the team were not able to give constructive feedback for the design on time and we went on and presented it like that.

Incomplete features

Reason: We did not do a good time management of our very busy schedule. And this resulted in some bugs and not expected behavior of the implemented features.

Team members not participating meetings

Reasons: Team members did not participate meetings with excuses that they have to study for other subjects (e.g. Math).

Commitments: As a team we agreed that we need to communicate more with each other so that we do not have communication problems.

As a team we agreed that we will put more effort in developing the next increment so that we have a quality product at the release.

As a team we agreed that we will update each other with new developments on the project and provide our work on time.
